

Dear Parent or Guardian,

I am pleased to inform you of your child's participation in Vmath®, an intensive math program designed to strengthen your child's understanding of important math concepts, skills, and strategies. Vmath's curriculum and assessment materials will motivate your child's interest in learning, even if math has been difficult in the past.

Vmath enables your child to meet grade-level goals and build skills for long-term success in math through proven curriculum materials, assessments, and lively activities. Vmath provides:

- 30–40 minutes of daily math instruction (in addition to the core math program)
- 10 modules of instruction that focus on specific math topics and skills, such as whole numbers, fractions, and decimals
- A systematic and explicit instructional design organized to offer immediate correction feedback to ensure mastery
- Consistent and effective assessments to monitor your child's progress

VmathLive™ is an optional Internet component of the Vmath curriculum. It allows your child to practice and apply important math skills and compare progress with students from around the world. VmathLive can be accessed from any computer with an Internet connection and may be used by your child at school, home, the library, or in any after-school setting.

For more information about Vmath, VmathLive, and Voyager Expanded Learning (creator and publisher of Vmath materials), go to: <http://www.voyagerlearning.com>.

With your investment of time, patience, and continual encouragement, your child will develop the tools necessary for a lifelong interest in learning and long-term success in math.

Sincerely,

Jill Jenerette
